GoTall reported flow: 31 steps (ScreensDesign (secondary): 31 onboarding steps, paywall before the reveal). Measured – Flow: promise, goal, about, height, parents, building, reveal (7 screens, 4 questions) then habits, plan, priming, paywall. Free result before the paywall. Source: design/measured-slice-spec.md sections 1-2 and 6. Taps are a design estimate until timed in the demo.

VERDICT

GoTall needs about 31 steps and puts the paywall between the user and the answer. Measured gives the answer after 4 questions, free, and shows the full price.

PROMISE AND PERSONALISATION

What screen 1 promises, and which questions matter

SCREEN 1 PROMISE

headline pending - copy it from 01.png

BENEFIT OR FEATURE?

pending

Screen 1 not yet captured. Judge: does it promise an outcome (benefit) or describe the app (feature)? Store subtitle is '#1 height predictor & maxxer' (feature plus status claim).

MEASURED'S PROMISE

Your honest adult height, in 60 seconds. 4 questions, no account, result before any paywall.

Promise states the cost up front: '4 questions - about 60 seconds'. All 4 answers change a later screen (unit, silhouettes, range width, plan order). See slice spec section 3.

Questions asked vs questions that change later screens

QUESTION (GOTALL)	USED LATER?	NOTE
Parent heights	to verify	Reviewers report being asked, even about absent fathers (secondary)
Age / birth date	to verify	
Sleep, food, activity	to verify	Store description says used for the plan (secondary)
Puberty stage quiz	Changes a later screen	Answers later referenced by AI Coach (ScreensDesign, secondary)
Photo of yourself	to verify	Reported by reviewers (secondary)

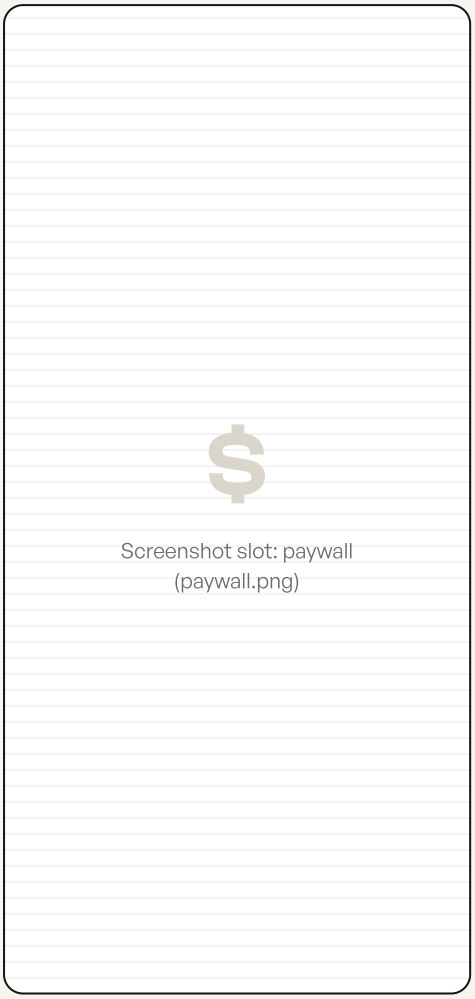

Measured: every answer changes something

ANSWER	WHAT CHANGES
Goal	Wording on reveal, plan and paywall headlines
Sex, age	Growth curve, confidence note, building lines
Height, unit	"X cm to go", silhouette, units everywhere
Parents / "I don't know"	Silhouette row, range width (+/-8.5 to +/-10.5 cm) and a note
Sleep, activity, diet	Which habits appear in the plan, and their order

Source: design/measured-slice-spec.md section 3. GoTall rows marked "to verify" need a screenshot check.

PAYWALL TEARDOWN

Where the result gets held back

Position	After the quiz, before the result is revealed SECONDARY ScreensDesign; reviews
Trial	3-day free trial, converts to yearly SECONDARY ScreensDesign
Headline price framing	Yearly shown as $0.67/week SECONDARY ScreensDesign; reviewers report $35-$60 charged at once
Plans / prices	IAP list: Yearly $59.99 / $34.99 / $9.99 variants, Weekly $1.99-$5.99, GoTall Access $4.99 SECONDARY App Store IAP list (does not say which is shown)
Urgency	3-minute countdown timer SECONDARY ScreensDesign
Social proof	Testimonial + star rating SECONDARY ScreensDesign
Close button	measure pending SECONDARY measure: is there an X, how visible, where, any delay?
Discount on dismiss	A later 'discount' offer reported SECONDARY Review (us, 1 star)
Fear copy	'Costs of being short' / dating claims reported SECONDARY Review paraphrase (gb, 1 star)

Dark patterns

- Result withheld until payment (bait and switch, per reviewers)
- Fake urgency: 3-minute countdown
- Price anchoring: $0.67/week hides the lump-sum yearly charge
- Trial presented as a free subscription that auto-converts to a full year
- Fear and status copy aimed at an audience that includes minors (age rating 9+)

HOW MEASURED ANSWERS IT

Measured paywall: visible X, full price largest ($29.99 / year), trial end date and 'Today: $0', in-app cancel path, no countdown, and the result is already free.

REVIEWS TO DESIGN OPPORTUNITIES

What users complain about, and our answer

150 reviews fetched via Apple RSS (us/gb/ca/au), 119 are 1-3 star. Keyword tallies overlap, approximate. Fetched 22 Oct 2026. Secondary source.

THEME	COUNT	QUOTE	HOW MEASURED ANSWERS IT
Result locked behind paywall after long quiz	95	*"I did the whole questionnaire and wanted to get my results but at the last second told me I had to pay (ca, 1 star)"*	Free result after 4 questions; the paywall only gates the plan.
Time wasted on long personal questionnaire	43	*"Tell me up front so that I don't waste my time. (us, 1 star)"*	'4 questions - about 60 seconds' on screen 1, a progress bar, the rest optional after the result.
Billing surprises	19	*"It said $0.67 per week but it really charged me $35. (us, 1 star)"*	Full billed amount first, trial end date, 2-day reminder, cancel path shown.
Distrust of accuracy	13	*"I typed in a dream height of 185cm and the app says that the probability is very low. However the coach is predicting a height of 186cm. (au, 2 star)"*	One model, a range with stated error (+/-8.5 cm), method explained on the reveal.
Privacy / sensitive inputs	9	*"Not fair how it asks me how tall my dad is when I've never met the guy (gb, 1 star)"*	'I don't know' for each parent, the range widens and says so; no photo, no account.
Feature bugs and gaps	5	*"What happened to the sleep score? It stopped going after week 13 (us, 3 star)"*	Small scope: a plan checklist that works; no referral or scoring promises.

Counts are keyword tallies over 119 low-star reviews and overlap; quotes are verbatim from the Apple RSS feed. Source: research/gotall-research.md.
